

Winterbrook Falls directions – how to get to the Winterbrook Falls carpark?

Winterbrook Falls is found in Winterbrook Falls Regional Reserve, south of Ulverstone.

The tracks to Winterbrook include the Tramway Track and Maxwells Track. Both tracks are a PWS track class T2, AS2156 Class 4 (rough bushwalking track, limited surfacing, occasional obstacles, directional signposts at start and track markers where necessary). The Tramway Track includes old forestry interpretative signage and is more regularly maintained. It can still get muddy and waterlogged in places. It features sections of the old tramway, snig tracks and bridges if you look hard enough under the moss.

There are pollen tubes located along the track that are part of a long-term monitoring project.

The Tramway walking track is marked with flagging tape, orange arrows and wooden markers (ensure you can see a track pad ahead before following to the next one).

Recent information regarding Maxwells Track track markers is not available and track pruning has not occurred for some time.

Driving there

- Be aware that Google Maps only contains the location of the falls, not the carpark (location below). Apple Maps appears to show the correct directions but will advise that you need to walk a section that is drivable.
- Access is generally suitable for 2WD.
- Mobile reception is low in the carpark, messages may get through if you hold your phone up. Reception is available higher on the track.
- Access from Cradle/Sheffield/Lorinna etc – Google will suggest access via Moina and Wilmot Dam. This access is unconfirmed, there may be a Hydro gate on this road.
